Plaintiff, MARILYN BENNETT, the wife of the decedent, and plaintiffs, SCOTT BENNETT and CHAD BENNETT, the sons of the decedent, have filed the declaration under penalty of perjury required by Code of Civil Procedure section 377.32. Plaintiffs bring this action as the successors in interest to the decedent as well as individually under the laws of the State of California, pursuant to Cal. Code Civ. Proc. §§ 377.10 et seq., to recover damages for personal injuries sustained by, and the wrongful death of, plaintiffs' decedent as the direct and proximate result of defendants' wrongful conduct in connection with the designing, developing, manufacturing, distributing, labeling, advertising, marketing, promoting, and selling of the prescription drug Neurontin, especially for such "off-label" use as the treatment of pain, a purpose for which Neurontin had not received FDA approval, and at dosages higher than had been approved by the FDA and had been properly tested on humans, even though the drug had not been tested and studied for that purpose and had not been found to be safe and effective at any dosage for the treatment of pain.

JURISDICTION AND VENUE

- Jurisdiction exists as against defendants, PFIZER INC., PARKE-DAVIS, a 2. division of Warner-Lambert Company and Warner-Lambert Company LLC (hereinafter "PARKE-DAVIS"), WARNER-LAMBERT COMPANY and WARNER-LAMBERT COMPANY LLC, pursuant to:
- 28 U.S.C. Section 1332, in that plaintiffs are successors in interest to the (a) Estate of ALAN BENNETT, Deceased, plaintiff, MARILYN BENNETT, is a citizen and resident of the State of California, plaintiffs, SCOTT BENNETT and CHAD BENNETT, are citizens and residents of the State of Colorado, at the time of his death, plaintiffs' decedent, ALAN BENNETT, was a citizen and resident of the State of California, defendant, PFIZER INC., is incorporated in business in the State of Delaware, and maintains its principal place of business in the State of New York, defendant, PARKE-DAVIS, is incorporated in the State of Michigan, and maintains its principal place of business in the State of New Jersey, defendant, WARNER-LAMBERT COMPANY, is incorporated in the State of Delaware and maintains its principal place of business in the State of New Jersey, defendant, WARNER-LAMBERT COMPANY

LLC, is a limited liability company organized under the laws of the State of Delaware, whose sole shareholder and member is defendant, PFIZER INC., and because the amount in controversy exceeds the sum of \$75,000.00, and because there is complete diversity of citizenship between plaintiffs and defendants.

Venue properly lies in this Court pursuant to 28 U.S.C. Section 1391(a)(2) (b) because a substantial part of the events or omissions giving rise to the claim occurred in this judicial district.

PARTIES

- 3. That the above-named plaintiffs' decedent, ALAN BENNETT, was the Husband, Father and Next of Kin of the plaintiffs above-named, MARILYN BENNETT, SCOTT BENNETT and CHAD BENNETT, and on and prior to the 2nd day of May, 2001, plaintiffs' decedent and plaintiff, MARILYN BENNETT, resided in San Diego County, State of California, and plaintiffs, SCOTT BENNETT and CHAD BENNETT, resided in Arvada, Colorado.
- That at the time of death on May 2, 2001, plaintiffs' decedent was then of the age 4. of 48 years and prior thereto, was generally in good health, industrious and possessed all faculties.
- That at the time of plaintiffs' decedent's death, he was survived by his wife, 5. plaintiff, MARILYN BENNETT, of Vista, California, and his sons, plaintiffs, SCOTT BENNETT and CHAD BENNETT, of Arvada, Colorado.
- That at all times hereinafter mentioned, upon information and belief, defendant, 6. PFIZER INC., was and still is a foreign corporation organized under the laws of the State of Delaware.
- 7. That at all times hereinafter mentioned, upon information and belief, defendant, PFIZER INC., was and still is a foreign corporation authorized to do business in the State of California.
- That at all times hereinafter mentioned, upon information and belief, defendant, 8. PFIZER INC., was and still is a business entity actually doing business in the State of California.

BACKGROUND

STATEMENT OF THE CASE

Pursuant to the Food, Drug, and Cosmetic Act ("FDCA") 21 U.S.C. §§ 301 et seq., 101.

12

28

21

22

23

24

25

26

27

COMPLAINT

new pharmaceutical drugs cannot be distributed in interstate commerce unless the sponsor of the drug demonstrates to the satisfaction of the Food and Drug Administration ("FDA") that the drug is safe and effective for each of its intended uses. 21 U.S.C. § 355(a) and (d).

- 102. However, the FDCA does not prevent doctors from prescribing a drug approved for a particular use for other uses that are different than those approved by the FDA ("off-label" usage).
- 103. Nonetheless, even though physicians may prescribe drugs for "off-label" usage, the FDCA prohibits drug manufacturers themselves from marketing and promoting a drug for a use that the FDA has not approved. 21 U.S.C. § 331(d).
- 104. A manufacturer illegally "misbrands" a drug if the drug's labeling includes information about unapproved uses or if the manufacturer engages directly or indirectly in marketing or promoting the drug for unapproved uses.
- 105. Instead, if a manufacturer desires to market and promote the drug for new use s in addition to those already approved, the materials on "off-label" usage must meet certain stringent requirements and the manufacturer must resubmit the drug to the FDA testing and approval process for the proposed new use.
- 106. The above-described statutory and regulatory system and process is designed to protect the public, including plaintiff, from the dangers arising from drugs which, although approved for a certain specific condition, disease or purpose, could cause injury and harm if used for an "off-label" purpose without adequate study and testing of the drug for such "off-label" usage, and to protect the public, including plaintiffs' decedent herein, from the dangers arising from deceptive, misleading, and inaccurate advertising, marketing, and promotional materials issued directly or indirectly by the manufacturer to encourage the "off-label" usage of the drug without adequate testing and study of that drug for such "off-label" usage.
- 107. PARKE-DAVIS, now owned by PFIZER INC., applied for, and in December, 1993, received FDA approval to market and sell Neurontin solely for "adjunctive therapy" in the treatment of certain types of seizures in adult patients suffering from epilepsy, and the FDA approved labeling of Neurontin for that purpose and stated that the drug is only effective at 900 to

At no time prior to plaintiffs' decedent being prescribed Neurontin, did defendants

27 28 receive FDA approval for any other use of Neurontin except for the above-described treatment of epilepsy or for higher dosages for any purpose, and the FDA never approved the usage of Neurontin at any dosage for the treatment of pain. Commencing in 1995, defendants, as the manufacturer of Neurontin, began to 109.

- directly and indirectly advertise, market and promote Neurontin for additional "off-label" uses for which FDA approval had not been obtained, including treatment for pain and at higher dosages than had been tested and approved, in violation of the above-described statutory and regulatory system and process, including the FDCA, which prohibits manufacturers from directly or indirectly advertising, marketing and promoting a drug for "off-label" usage, and instead requires that the manufacturer resubmit the drug to the FDA testing and approval process for the proposed new use and that the materials issued by the manufacturer relating to the proposed new use meet certain stringent requirements.
- Defendants, as the manufacturer of Neurontin, directly and indirectly advertised, 110. marketed and promoted Neurontin for the treatment of pain and encouraged that higher dosages than those tested be prescribed, even though defendants knew or should have known that there were not adequate tests and studies establishing and confirming that Neurontin was safe and effective for the treatment of bipolar disorder, and even though defendants knew or should have known that there were no adequate studies showing that Neurontin was safe when prescribed at dosages higher than those approved by the FDA.
- At all times hereinafter mentioned, upon information and belief, defendants 111. marketed and promoted Neurontin for the treatment of pain even though defendants knew or should have known that Neurontin caused many symptoms or related risk factors associated with suicidal behavior by persons suffering from pain.
- At all times hereinafter mentioned, upon information and belief, defendants 112. marketed and promoted Neurontin for the treatment of pain even though defendants knew or should have known that Neurontin had no effect in relieving or correcting the symptoms or causes

27

26

28

Defendants' conduct in promoting "off-label" uses of Neurontin for treatment of 113. pain constituted a wanton, callous and reckless disregard of the safety of the public and, in particular of persons suffering from pain.

- In promoting "off-label" uses of Neurontin, and at higher dosages than approved by the FDA, including treatment of pain, defendants acted without regard to the potential danger and harm to persons for whom the drug was prescribed for the treatment of pain.
- Defendants actively distributed, sold and placed Neurontin into the stream of 115. commerce and directly and indirectly advertised, marketed and promoted Neurontin as being safe and effective for the treatment of pain and in dosages higher than those approved by the FDA, even though the only approved use of Neurontin at that time was as "adjunctive therapy" for the treatment of epilepsy and even though the FDA had specified a maximum recommended dosage.
- Neurontin is not reasonably safe and effective for the treatment of persons 116. suffering from bipolar disorder, and is not reasonably safe when consumed in higher dosages than those approved by the FDA, and defendants' conduct of illegally advertising, marketing and promoting Neurontin for this "off-label" uses was unlawful, deceptive and misleading and was violative of the FDCA.
- By reason of defendants' conduct of directly and indirectly advertising, marketing and promoting Neurontin for the treatment of bipolar disorder in an unlawful manner, physicians commenced prescribing Neurontin to their patients diagnosed as suffering from bipolar disorder, frequently at dosages higher than those approved by the FDA.
- Upon information and belief, defendant, WARNER-LAMBERT COMPANY 118. LLC, was indicted in the United States District Court for the District of Massachusetts for violations of 21 U.S.C. §§ 331(a), 331(d), 333(a), 352(f)(1) and 355, and a copy of such criminal Information is annexed hereto as Exhibit "A" and incorporated into this complaint by reference.
- Upon information and belief, on or about the 7th day of June, 2004, defendant, 119. WARNER-LAMBERT COMPANY LLC, formally pled guilty to all charges contained in the Information.

- 120. The drug Neurontin was ineffective in the treatment of the causes and symptoms of plaintiffs' decedent's condition of pain and plaintiffs' decedent sustained injury and harm by reason of this reliance upon Neurontin to be effective in the treatment as prescribed by his physician of such pain condition.
- 121. That at all times hereinafter mentioned, plaintiffs' decedent was diagnosed by his physician as suffering from pain and was being treated by his physician for such condition.
- 122. That at all times hereinafter mentioned, upon information and belief, in reliance upon defendants' direct and indirect advertising, marketing and promoting of Neurontin as being safe and effective for the treatment of pain, plaintiffs' decedent's physician prescribed Neurontin to treat plaintiffs' decedent's pain.
- 123. That at all times hereinafter mentioned, plaintiffs' decedent purchased and consumed Neurontin, as recommended and prescribed by his physician and in the dosages prescribed, in an effort to control the effects of pain.
- 124. The drug Neurontin was not safe and effective for the treatment of plaintiffs' decedent's condition of pain, and plaintiffs' decedent sustained injury and harm by reason of his consumption of Neurontin as prescribed by his physician in an effort to treat his pain.
- 125. The drug Neurontin was ineffective in the treatment of the causes and symptoms of plaintiffs' decedent's condition of pain and plaintiffs' decedent sustained injury and harm by reason of this reliance upon Neurontin to be effective in the treatment as prescribed by his physician for such pain.
- 126. By reason of plaintiffs' decedent's consumption of Neurontin in a manner and at a dosage prescribed by his physician in an effort to treat his pain, on May 2, 2001, plaintiffs' decedent committed suicide.
- 127. The injuries and death sustained by plaintiffs' decedent were caused by or were contributed to by plaintiffs' decedent's consumption of Neurontin at a dosage prescribed by his physician for the treatment of pain in a manner consistent with the direct and indirect advertising, marketing and promoting of this drug for such "off-label" use by defendants.

COMPLAINT

FIRST CAUSE OF ACTION

Negligence

- 128. Plaintiffs repeat and reiterate the allegations previously set forth herein.
- 129. That at all times hereinafter mentioned, defendants were under a duty to exercise reasonable care in the design and development of Neurontin and, in particular, in the advertising, marketing and promoting of Neurontin, both directly and indirectly, to ensure that Neurontin was not used in the treatment of conditions such as pain for which it was not effective and to ensure that Neurontin was not used in a manner or to treat conditions where defendants knew or should have known that the user could sustain injuries and harm from the drug.
- willfully displayed a morally culpable and conscious disregard of the rights of others in that they failed to exercise reasonable care and failed to fulfill the above-stated duty by the manner that defendants, directly and indirectly, advertised, marketed and promoted Neurontin for the treatment of pain, even though Neurontin had not been scientifically determined to be safe for the treatment of pain and even though Neurontin was, in fact, not reasonably safe for the treatment of pain and furthermore, defendants failed to adequately warn of the risk of suicide or aggressive, self-destructive behavior of which defendants knew or should have known about.
- 131. That defendants were further negligent, reckless, grossly negligent, wanton and willfully displayed a morally culpable and conscious disregard of the rights of others by manufacturing, distributing, selling, advertising, marketing and promoting Neurontin even though such drug was not safe or effective for any purpose because it caused or influenced persons using the drug for any purpose to engage in self-destructive behavior including attempting to commit suicide and by failing to adequately warn the public of such risks.
- 132. Defendants have an ongoing duty of pharmacovigilance. As part of this duty, defendants are required to continually monitor, test, and analyze data regarding the safety, efficacy, and prescribing practices of their marketed drugs, including Neurontin. Defendants continually receive reports from their own clinical trials, practicing physicians, individual patients and regulatory authorities concerning adverse events that occur in patients taking Neurontin and

defendants' other marketed drugs. Furthermore, defendants continue to conduct clinical trials for their marketed drugs long after the drug is approved for use. Defendants have a continuing duty to inform doctors, regulatory agencies, and the public of new safety and efficacy information they learn, or should have learned, about their marketed drugs once that information becomes available to defendants, whether through defendants' clinical trials, other outside sources or pharmacovigilance activities. Specifically, when defendants learn, or should have learned, of new safety information associated with their marketed drugs, they have a duty to promptly disseminate that data to the public. Defendants also have a continuing duty to monitor epidemiology and pharmacovigilance data regarding their marketed drugs and promptly report any safety concerns that arise through epidemiologic study or data.

- pharmacovigilance with respect to plaintiffs' decedent. Defendants, through clinical trials and other adverse event reports, learned that there was a serious problem of suicidality associated with Neurontin use and failed to inform doctors, regulatory agencies and the public of this risk. Defendants had the means and the resources to perform their pharmacovigilance duties for the entire time Neurontin has been on the market in the United States.
- under 21 C.F.R. § 314.80(c) by, <u>inter alia</u>, failing to report each adverse drug experience concerning Neurontin that is both serious and unexpected, whether foreign or domestic, as soon as possible but in no case later than 15 calendar days after initial receipt of the information by defendants, failing to promptly investigate all adverse drug experiences concerning Neurontin that are the subject of these postmarketing 15-day Alert reports, failing to submit followup reports within 15 calendar days of receipt of new information or as requested by FDA, and, if additional information was not obtainable, failing to maintain records of the unsuccessful steps taken to seek additional information.
- 135. Defendants' failure to perform adequate pharmacovigilance and failure to comply with the postmarketing requirements of FDA regulations is evidence of defendants' negligence and constitutes negligence per se.

The death of plaintiffs' decedent was caused by or was contributed to by the	
negligence, recklessness, gross negligence, wantonness, willfulness, and conscious and callous	
disregard of the safety of the public, including plaintiffs' decedent, on the part of defendants in	
the design, manufacture, distribution, advertising, marketing and promoting of Neurontin as bei	ng
safe and effective in the treatment of pain and by inducing the public, including plaintiffs'	
decedent, to believe that Neurontin was effective in the treatment of the causes and symptoms o	f
pain.	

- That at all times hereinafter mentioned, upon information and belief, the above-137 described culpable conduct by defendants was a proximate cause of injuries sustained by plaintiffs' decedent.
- That at all times hereinafter mentioned, plaintiffs' decedent did not contribute to 138 plaintiffs' decedent's injuries by reason of any negligence or culpable conduct on plaintiffs' decedent's part.
- That as a result of the aforesaid occurrence, the injuries sustained and the death of 139 plaintiffs' decedent resulting therefrom, as aforesaid, the Next of Kin of plaintiffs' decedent suffered extensive monetary and pecuniary losses and other compensatory damages, and there was also incurred and paid out necessary medical, hospital, funeral and concomitant expenses.
- That by reason of the facts and premises aforesaid, plaintiffs' decedent's 140. beneficiaries sustained damages in a sum which exceeds the jurisdictional limits of all lower courts which would have jurisdiction of this matter, and in addition thereto, plaintiffs seek punitive and exemplary damages against defendants in an amount to be determined upon the trial of this matter.

SECOND CAUSE OF ACTION

Breach of Warranty

- Plaintiffs repeat and reiterate the allegations previously set forth herein. 141.
- That at all times hereinafter mentioned, upon information and belief, defendants, 142. by directly and indirectly advertising, marketing and promoting Neurontin for the treatment of pain and by placing this drug in the stream of commerce knowing that Neurontin would be

19

27

prescribed for the treatment of pain in reliance upon the representations of defendants, expressly warranted to all foreseeable users of this drug, including plaintiffs' decedent, that Neurontin was safe and effective for the treatment of pain.

- That defendants impliedly warranted in manufacturing, distributing, selling, 143. advertising, marketing and promoting Neurontin to all foreseeable users, including plaintiffs' decedent, that Neurontin was safe and effective for the purposes for which it had been placed in the stream of commerce by defendants, including for the treatment of pain, and that Neurontin was reasonably safe, proper, merchantable and fit for the intended purpose, including for the treatment of pain.
- That at all times hereinafter mentioned, plaintiffs' decedent relied upon the 144. aforesaid express and implied warranties by defendants.
- That at all times hereinafter mentioned, plaintiffs' decedent's use of Neurontin 145. prior to and up to the time of the above-described incident was consistent with the purposes for which defendants directly and indirectly advertised, marketed and promoted Neurontin, and plaintiffs' decedent's use of Neurontin was reasonably contemplated, intended and foreseen by defendants at the time of the distribution and sale of Neurontin by defendants, and, therefore, plaintiffs' decedent's use of Neurontin was within the scope of the above-described express and implied warranties.
- Defendants breached the aforesaid express and implied warranties because 146. Neurontin was not safe and effective for the treatment of pain and because plaintiffs' decedent's use of Neurontin for the treatment of pain caused or contributed to the incident described herein.
- Plaintiffs' decedent gave appropriate notice to defendants of the breach of the 147. aforesaid express and implied warranties or such notice was otherwise excused.
- That by reason of the facts and premises aforesaid, plaintiffs' decedent's 148. beneficiaries sustained damages in a sum which exceeds the jurisdictional limits of all lower courts which would have jurisdiction of this matter, and in addition thereto, plaintiffs seek punitive and exemplary damages against defendants in an amount to be determined upon the trial of this matter.

COMPLAINT

Plaintiffs repeat and reiterate the allegations previously set forth herein.

THIRD CAUSE OF ACTION

- That at all times hereinafter mentioned, upon information and belief, defendants, 150. by directly and indirectly advertising, marketing and promoting Neurontin for the treatment of pain and by placing this drug in the stream of commerce knowing that Neurontin would be prescribed for the treatment of pain in reliance upon the representations of defendants, expressly warranted to all foreseeable users of this drug, including plaintiffs' decedent, that Neurontin was safe and effective for the treatment of pain.
- That defendants impliedly warranted in manufacturing, distributing, selling, 151. advertising, marketing and promoting Neurontin to all foreseeable users, including plaintiffs' decedent, that Neurontin was safe and effective for the purposes for which it had been placed in the stream of commerce by defendants, including for the treatment of pain, and that Neurontin was reasonably safe, proper, merchantable and fit for the intended purpose, including for the treatment of pain.
- That at all times hereinafter mentioned, plaintiffs' decedent relied upon the 152. aforesaid express and implied warranties by defendants.
- That at all times hereinafter mentioned, plaintiffs' decedent's use of Neurontin 153. prior to and up to the time of the above-described incident was consistent with the purposes for which defendants directly and indirectly advertised, marketed and promoted Neurontin, and plaintiffs' decedent's use of Neurontin was reasonably contemplated, intended and foreseen by defendants at the time of the distribution and sale of Neurontin by defendants, and, therefore, plaintiffs' decedent's use of Neurontin was within the scope of the above-described express and implied warranties.
- Defendants breached the aforesaid express and implied warranties because 154. Neurontin was not safe and effective for the treatment of pain and because plaintiffs' decedent's use of Neurontin for the treatment of pain caused or contributed to the incident described herein.
 - Plaintiffs' decedent gave appropriate notice to defendants of the breach of the 155.

aforesaid express and implied warranties or such notice was otherwise excused.

156. That by reason of the facts and premises aforesaid, plaintiffs' decedent's beneficiaries sustained damages in a sum which exceeds the jurisdictional limits of all lower courts which would have jurisdiction of this matter, and in addition thereto, plaintiffs seek punitive and exemplary damages against defendants in an amount to be determined upon the trial of this matter.

FOURTH CAUSE OF ACTION

<u>Fraud</u>

- 157. Plaintiffs repeat and reiterate the allegations previously set forth herein.
- 158. Defendants materially misrepresented material facts concerning the safety and effectiveness of Neurontin in the treatment of pain.
- 159. Defendants' affirmative misrepresentations include but are not limited to the acts set forth in the following paragraphs.
- 160. In or about 1993, defendants submitted a new drug application (NDA) for approval of a drug called Neurontin (also known by the chemical name "Gabapentin"), which was a new drug within the meaning of 21 U.S.C. § 321(p) and 21 C.F.R. § 310.3(h)(4) and (5). In that application, defendants sought to demonstrate the drug's safety and efficacy for, and sought approval for, use only as adjunctive therapy in the treatment of partial seizures with and without secondary generalization in adults with epilepsy. On or about December 30, 1993, the FDA approved Neurontin for that specific use only. Because defendants had not sought approval of any other uses nor submitted information in its NDA which demonstrated the safety and efficacy of Neurontin for any such uses, Neurontin was not approved for any use or condition other than that approved use.
- 161. Commencing in at least June of 1995 and continuing through at least the date of this incident, unapproved uses for Neurontin included post-herpetic neuralgia, painful diabetic neuralgia, anxiety disorder, social phobias, bipolar disorder, alcohol withdrawal syndrome, amyotrophic lateral sclerosis (ALS), spinal cord injury, essential tremor, restless leg syndrome, reflex sympathetic dystrophy (RSD), and migraine headaches, among other uses.

26

27

- Defendants did not file a new NDA seeking FDA approval for any of these 162. unapproved uses at any time prior to the date of this incident.
- Defendants conducted evaluations of the market potential for certain of the 163. unapproved uses for Neurontin, including but not limited to: post-herpetic neuralgia, painful diabetic neuralgia, anxiety disorder, social phobias, and bipolar disorder.
- In or about the fall of 1995, defendants' Southeast Customer Business Unit ("SECBU") created a planning document regarding Neurontin, which included a page titled: "SECBU RIGHT ON THE MARK WITH NEURONTIN AND PAIN" over a picture of a target and listed "Neurontin for Pain Strategies" including plans for conference calls on pain and a pain consultant meeting.
- Certain defendants' annual strategic plans and other marketing planning 165. documents for Neurontin included quarterly and annual goals, objectives, strategies and tactics for increasing sales of the unapproved uses of the drug. The marketing plans budgeted for and funded these tactics.
- Commencing in early 1995 and continuing at least through the date of this 166. incident, defendants determined not to seek FDA approval for certain unapproved uses.
- In or about April and May of 1995, defendants performed a marketing assessment 167. of proposed psychiatric indications for Neurontin. In that marketing assessment, defendants forecast potential revenue from Neurontin for bipolar disorder and anxiety treatment under two scenarios: with and without FDA approval. Defendants' Neurontin Development Team and New Product Committee reviewed the potential uses and concluded that defendants would not seek approval to promote and sell the drug for these unapproved uses.
- In or about July of 1995, defendants' assessment of Neurontin's market potential 168. for neuropathic pain was distributed to defendants' Neurontin Development Team and to defendants' Vice President for marketing. That assessment stated that "there is no intention to fully develop the indication at this point." Full development would have required submission of an NDA to the FDA for approval.
- One of the principal factors defendants considered in determining whether to seek 169. **COMPLAINT** 23

approval for Neurontin for other uses was the short patent protection available for Neurontin. Another factor was the negative impact such approval might generate on potential sales of another drug that defendants were developing. Defendants expected this new drug would be approved by the FDA not only for epilepsy but also for a variety of uses beyond Neurontin's approved use.

- distribute generic equivalents of Neurontin. Such approval, however, would be limited to the approved therapeutic use for Neurontin set forth in defendants' original NDA approval for Neurontin. If defendants sought and obtained approval for any of the unapproved uses, then upon expiration of the patent, generic equivalents of Neurontin could also be sold for those unapproved uses. Defendants were concerned that under those circumstances the generic equivalents would undermine sales of the new drug that was under development.
- 171. Commencing about June of 1995 until at least the date of this incident, by certain conduct described in greater detail below, defendants promoted the sale and use of Neurontin for certain conditions other than the approved use.
- 172. In October 1995, a member of defendants' Epilepsy Disease Team circulated a memorandum to a group including other senior members of defendants' Epilepsy Disease Team noting that data purchased from an outside vendor showed that doctors had reported that the main message of certain sales pitches (known as "details"), given by 10 of 50 of defendants' sales representatives for whom data was available in a two-month period, was for off-label use of Neurontin. Nine were for pain and one was for reflex sympathetic dystrophy, a painful nerve damage syndrome.
- 173. On or about July 10, 1996, defendants' sales representative met with a doctor in Monroe, Louisiana, and detailed a doctor on Neurontin for the treatment of pain.
- 174. Also in 1996, a sales representative created a document that stated that sales representatives could ask doctors during a Neurontin detail if they ever used other anti-epileptic drugs for painful neuropathies and could mention that approximately 35% of all Neurontin use is non-seizure. This same document, entitled "Neurontin Can Do/Can't Do," stated that sales

representatives could present lunch programs on Neurontin and pain. The document indicated that it was to be forwarded to the Northcentral Customer Business Unit.

- Defendants employed "medical liaisons" who were presented to physicians as 175. employees of the company's Medical and Scientific Affairs Department. On the following occasions, which are not all-inclusive, defendants' medical liaisons promoted Neurontin for unapproved uses:
- In or about June of 1996 defendants' sales representative requested that (a) defendants' medical liaison make a presentation at Longwood Gardens in Kennett Square, Pennsylvania, to a group of physicians who were members of a local medical society.
- The sales representative and the medical liaison selected the topic for the (b) presentation to the local medical society. After deciding in consultation with the sales representative that Neurontin would be the topic of the presentation, the medical liaison prepared the presentation.
- Among the topics of the presentation was the use of Neurontin for (c) unapproved uses.
- During the presentation, in the presence of the sales representative, the (d) medical liaison promoted the use of Neurontin in the treatment of a number of unapproved uses.
- After the presentation, defendants' Medical Director praised the event as (e) "another great example of use of the medical liaisons" and an area business manager called it an "outstanding utilization of . . . one of the medical affairs liaisons."
- Defendants organized a consultant meeting at the Jupiter Beach Resort in Palm 176. Beach, Florida, on April 19-21, 1996. Approximately 42 physicians attended the meeting, including nine physicians who made presentations relating to unapproved uses of Neurontin.
- Defendants invited certain doctors to this meeting based upon their history of 177. writing a large number of prescriptions for Neurontin or similar drugs. As part of this event, defendants paid for accommodations and meals for the invited doctors and their spouse or guest, and paid an honorarium to each of the doctor attendees.
- Among the presentations made to the physicians in attendance was one relating to 178. 25 **COMPLAINT**

26

27

28

unapproved uses entitled "Reduction of Pain Symptoms During Treatment with Gabapentin." In the meeting's agenda, this presentation was listed as "Anticonvulsant Advances." During this presentation, Neurontin was promoted for use in the treatment of pain.

- Another presentation made at the Jupiter Beach conference was entitled 179. "Anticonvulsant Advances: Nonepileptic Uses of Anti Epileptic Drugs." During this presentation, Neurontin was promoted for use in the treatment of essential tremor, episodic dyscontrol and pain.
- On or about May 8, 1996, following the Jupiter Beach conference, defendants 180. circulated to employees in the Northeast region the agenda to the meeting, specifying the off-label topics, the faculty list, the attendee list and presentation abstracts discussing the off-label content of the presentations.
- From August 1-5, 1996, defendants organized an "advisory board meeting," in 181. Atlanta, Georgia, in conjunction with the 1996 Summer Olympics. Defendants expressly instructed several of the physician speakers to address some of the unapproved uses.
- During that meeting, defendants hosted doctors at the Chateau Elan Winery and 182. Resort, in Atlanta, Georgia, and paid all the expenses for eighteen "consultants" and their spouses to attend the Olympics, including tickets to the closing ceremonies. Defendants already had numerous opportunities to consult with the doctors and, in fact, many of them had spoken on defendants' behalf at prior meetings.
- Certain of the physician speakers promoted Neurontin for unapproved uses in their 183. presentations.
- On or about March 1, 1996, defendants sponsored a teleconference moderated by 184. defendants' employee with a pain specialist as a speaker on Neurontin. The speaker promoted Neurontin for the treatment of pain to doctors participating in the teleconference.
- In or about May 1996, defendants' Medical Director held such a teleconference entitled "Neurontin, A Clinical Update" in which the Medical Director promoted off-label uses of Neurontin to the doctors participating in the teleconference.
 - Defendants hosted dozens of "consultants" meetings between late 1995 and 1997 186. 26

	in which the "consultants" received payments and gratuities as well as presentations on "off-					
1						
2	label" Neurontin use designed to change the physicians' prescription writing habits. Such					
3	consultants' meetings included, but were not limited to the following:					
4	<u>Topic</u>	Location La Costa Resort, CA	<u>Dates</u> July 20-23, 1995			
5	Mastering Epilepsy		·

23	Neurological Conditions Conference	Ritz Carlton, Atlanta, GA	Sep. 27-28, 1997			
24	Other "consultants" meetings took place at Charleston, SC, Coconut Grove, FL, Naples, FL,					
25	Memphis, TN, Louisville, KY, Washington, DC, Aspen, CO, and other places. Hundreds, if not					
26	the area do of abraining received kickbooks to ottend these events					
27	187. Defendants rewarded do	octors for their advocacy of Ne	eurontin by paying them			
28	honoraria for lending their names to sci	ientific articles which were act	tually prepared and written			

4		
1	by third partie	es retained by defendants. In 1996, defendants retained AMM/ADELPHI, Ltd. and
2	Medical Educ	ation Systems, Inc., to prepare no less than twenty (20) articles for publication in
3	various neuro	logy and psychiatry journals. Most of these articles concerned "off-label" usage of
4	Neurontin and	d were generated so that defendants could completely control the publications
5	distributed pu	rsuant to its "publications strategy." The content of these articles were actually
6	written by nor	n-physician technical writers retained by defendants and defendants had the right to
7	control the co	ntent of all the articles. Defendants paid all expenses in connection with the
8	creation of the	ese publications.
9	188.	Defendants also founded a speakers' bureau, another method of making large and
10	numerous pay	ments to physicians who recommended Neurontin for "off-label" uses, together
11	with teleconfe	erences, dinner meetings, consultants meetings, educational seminars, and other
12	events.	
13	189.	Defendants utilized medical liaisons who were provided with new company slides
14	that detailed r	methods to increase "off-label" use of Neurontin, including the following:
15		Reflex sympathetic dystrophy (RSD)
16		Peripheral neuropathy
17		Diabetic neuropathy
18		Trigeminal neuralgia
19		Post-herpetic neuralgia
20		Essential tremor
21		Restless leg syndrome (RLS)
22		Attention deficit disorder (ADD)
23		Periodic limb movement disorder
24		Migraine
25		Bipolar disorder
26		Amyotrophic lateral sclerosis (ALS/Lou Gehrig's Disease)
27		Drug or alcohol withdrawal seizures
28	190.	The following enumerated misrepresentations, which are not intended to be all-

inclusive, relating to "off-label" usage of Neurontin, were routinely made to physicians with the knowledge and consent of marketing personnel of defendants:

- Bipolar Disorder. Medical liaisons informed psychiatrists that early results a. from clinical trials evaluating Neurontin for the treatment of bipolar disorder indicated ninety percent (90%) response rate when Neurontin was started at 900 mg/day dosage and increased to a dosage of 4800 mg/day. No such results existed.
- Peripheral Neuropathy, Diabetic Neuropathy, and Other Pain Syndromes. b. Medical liaisons stated that clinical trials demonstrated that Neurontin was highly effective in the treatment of various pain syndromes and that a ninety percent (90%) response rate in the treatment of pain was being reported. No such body of evidence existed. Defendants continued to claim that physicians should use Neurontin at substantially higher doses than indicated by the labeling. Indeed, although medical liaisons routinely claimed Neurontin to be effective as monotherapy, in 1997 the FDA refused to find Neurontin as a safe and effective monotherapy.
- Reflex Sympathetic Dystrophy ("RSD"). Medical liaisons informed c. physicians that extensive evidence demonstrated the efficacy of Neurontin in the treatment of RSD. The only such evidence that existed was anecdotal reports of nominal scientific value.
- Attention Deficit Disorder ("ADD"). Medical liaisons were instructed to d. inform pediatricians that Neurontin was effective for the treatment of ADD. No data, other than occasional anecdotal evidence, supported this claim.
- Restless Leg Syndrome ("RLS"). RLS was another condition where defendants' medical liaisons were trained to refer to a growing body of date relating to the condition, when no scientific date existed.
- Trigeminal Neuralgia. Although medical liaisons represented that f. Neurontin could treat trigeminal neuralgia, again no scientific data supported this claim with the exception of occasional anecdotal reports. No data demonstrated that Neurontin was as effective as currently available pain killers, most of which were inexpensive.
- Post-Herpetic Neuralgia ("PHN"). Medical liaisons were trained to tell g. physicians that seventy-five percent (75%) to eighty percent (80%) of all PHN patients were

26

27

2	
_	

successfully treated with Neurontin. Once again, no clinical trial data supported such a claim.

- h. Essential Tremor Periodic Limb Movement Disorder ("ETPLMD").

 Medical liaisons were trained to allege that Neurontin was effective in the treatment of these conditions. No scientific data supported such claims with the exception of anecdotal reports of nominal scientific value.
- i. *Migraine*. Claims that Neurontin was effective in the treatment of migraine headaches were made by the medical liaisons and were supposedly based on early results from clinical trials. Although pilot studies had been such suggested and undertaken, no early results of clinical trials existed to support these claims. Once again, any data relating to treatment of migraines was purely anecdotal and of nominal scientific value. Most of the case reports were either created or sponsored by defendants.
- j. Drug and Alcohol Withdrawal Seizures. Medical liaisons suggested that Neurontin be used in the treatment of drug and alcohol withdrawals despite the lack of any data supporting Neurontin as an effective treatment for these conditions.
- 191. Defendants sponsored a 1998 study, which was scientifically valid, conducted at the Harvard Research Program, which concluded that patients receiving Neurontin did worse than those on sugar pills, but even though defendants were fully aware of these results from the tests which they sponsored, defendants did not publish the results until two years later after a substantial number of physicians had already been induced to prescribe Neurontin and a substantial number of patients had already been induced to take Neurontin.
- 192. At each of the presentations known to the plaintiff concerning Neurontin on pain, at least one of the presenters expressly stated or implied that Neurontin was effective for the treatment of pain. A representative statement was made by Dr. David Longmire, a participating physician, at the Jupiter Beach Consultants Meeting in April 1996 when he stated that Neurontin was effective for the treatment of pain. Dr. Longmire repeated that statement at a May 1996 Consultants Meeting at the Ritz Carlton in Boston. Another physician participant, Dr. Steven Schacter, made a similar statement at the May 1996 meeting when he stated that "pain specialists are finding that low dosages of Neurontin are effective." Comparable statements were made by

1	another physician participant, Dr. Bruce Nicholson, in April 1996 at the Jupiter Beach					
2	Consultants Meeting, in May 1996 at the Boston Ritz Carlton Consultants Meeting, and in June					
3	1996 at a Philadelphia Consultants Meeting. Upon information and belief, similar statements					
4	were made at all events presented by defendants that discussed Neurontin's use for pain					
5	indications. These events include, but are n	ot limited to the follow	ring events:

196. Without favorable results from a well-designed panic disorder clinical trial that established Neurontin's efficacy for that condition, Parke-Davis had no reasonable scientific basis for claiming that Neurontin was effective in treating panic disorder. Nonetheless, at events

COMPLAINT

produced by defendants, physician participants routinely stated that Neurontin was effective for 1 the treatment of panic disorder. Events presented by defendants that discussed Neurontin's use as 2 a treatment for panic disorder include, but are not limited to, the following events: 3 Location Date <u>Topic</u> 4 Mar. 29, 2000 Hyatt Regency Hotel Advisory Board Meeting 5 San Antonio, TX 6 Fairmont Scottsdale Jan. 21-23, 2000 Parke-Davis Speakers Bureau Meeting Princess, Scottsdale, AZ 7 Four Seasons Regent Merritt-Putnam Speakers Bureau Mar. 24-26, 2000 8 Beverly Wilshire Current Perspectives in the Understanding of Neurobehavioral Disorder Beverly Hills, 9 Wyndham New Orleans Merritt-Putnam Speakers Bureau Apr. 7-9, 2000 10 at Canal Place, New Orleans, 11 Enchantment Resort Merritt-Putnam Speakers Training Apr. 28-30, 2000 12 Sedona, AZ Perspectives in the Management of Neurological and Mood Disorders 13 Maison Robert Mar. 16, 1998 1998 CME Psychiatry Dinner Meeting 14 Boston, MA and Teleconference Series 15 1998 CME Psychiatry Dinner Meeting Mar. 16, 1998 Sunset Grill Nashville, TN and Teleconference Series 16 Pescatore Fish Cafe 1998 CME Psychiatry Dinner Meeting Mar. 16, 1998 17 and Teleconference Series Seattle, WA 18 Patrick's Bayside Bistro Mar. 17, 1998 1998 CME Psychiatry Dinner Meeting Pete's Beach, FL and Teleconference Series 19 1998 CME Psychiatry Dinner Meeting Mar. 17, 1998 Heathman Hotel 20 Portland, OR and Teleconference Series 21 Downtown Club 1998 CME Psychiatry Dinner Meeting Mar. 18, 1998 Philadelphia, PA and Teleconference Series 22 1998 CME Psychiatry Dinner Meeting Morton's of Chicago Mar. 18, 1998 Buckhead, Atlanta, GA and Teleconference Series 23 Huntington Hotel 1998 CME Psychiatry Dinner Meeting Mar. 18, 1998 24 San Francisco, CA and Teleconference Series 25 Mar. 19, 1998 Brass Elephant 1998 CME Psychiatry Dinner Meeting Baltimore, MD and Teleconference Series 26 Ristorante DeGrezia Mar. 19, 1998 1998 CME Psychiatry Dinner Meeting 27 New York, NY and Teleconference Series 28

Barcelona, Spain Oct. 23-25, 1998 The Use of Anticonvulsants in Psychiatry

197. On September 13, 1996, Parke-Davis submitted a supplemental NDA to approve Neurontin as monotherapy for partial seizures. The FDA determined the application to be nonapprovable on August 26, 1997, because of insufficiency of evidence of Neurontin's effectiveness. The FDA noted that Clinical Study 945-82 failed to yield evidence of effectiveness. Parke-Davis did not make public that its application for monotherapy had been denied. Representative events at which defendants continued to make presentations that Neurontin was effective for monotherapy without disclosing that the FDA had denied its application for a monotherapy indication include, but are not limited to, the following events:

Topic	<u>Date</u>	Location
Advisory Board Meeting	Mar. 29, 2000	Hyatt Regency Hotel San Antonio, TX
Monotherapy Speakers Bureau Meeting	September 1997	La Quinta Resort Palm Springs, CA

Thereafter, pursuant to marketing strategies and tactics developed by Parke-Davis 198. and defendants, defendants regularly presented programs in which physician participants touted Neurontin as being effective for the treatment of migraine. Events where such presentations were made include, but are not limited to, the following events:

Topic	<u>Date</u>	Location
Advisory Board Meeting	Mar. 29, 2000	Hyatt Regency Hotel San Antonio, TX
Gabapentin in the Management of Migraine	May 25, 1996	Short Hills, NJ

Notwithstanding the FDA's refusal to increase the maximum approved dosage of 199. Neurontin and its finding that no clinical evidence supported Neurontin's efficacy at dosages greater than 1800 mg per day, defendants presented numerous programs where physician participants asserted that Neurontin was effective and safe at dosages above 1800 mg. All such representations were false and misleading. Additionally, at these presentations the physician participants did not disclose the clinical trial evidence that demonstrated that there was no dose response above 1800 mg per day. Defendants' failure to provide this information was a violation

of defendants' duties to provide fair and balanced information, and made any prior representations about use of Neurontin at dosages greater than 1800 mg per day false and misleading. In addition to the events identified above, other events where these false and misleading statements were made include, but are not limited to, the following events:

<u>Topic</u>	<u>Date</u>	Location
Advisory Board Meeting on Neurontin	Feb. 4-6, 2000	Royal Sonesta New Orleans, LA
Merritt-Putnam Speakers Bureau Current Perspectives in the Understanding of Neurobehavioral Disorders	Mar. 24-26, 2000	Four Seasons Regent Beverly Wilshire Beverly Hills, CA
Advisory Board Meeting	Mar. 29, 2000	Hyatt Regency Hotel San Antonio, TX

200. On or about June 29, 2001, the FDA Division of Drug Marketing, Advertising and Communications (DDMAC) advised defendants that through routine monitoring and surveillance, the DDMAC has identified a slim jim (ID #NSJ5095A1) for Neurontin that is misleading and in violation of the FDCA and applicable regulations, in that this slim jim misleadingly claims improvement in quality of life (QOL) parameters based on the Neurontin Evaluation of Outcomes in Neurological Practice (NEON) study, that among other QOL parameters, the misleading presentation includes improvement in social limitations, memory difficulties, energy level, and work limitations, and that the NEON study is not considered to be substantial evidence for claims of QOL improvements because it is not a controlled study.

201. On or about July 1, 2002, the DDMAC advised defendants that through routine monitoring and surveillance, the DDMAC has identified a model (#NE 102254) for Neurontin (gabapentin) that is in violation of the FDCA and applicable regulations because it makes representations about Neurontin which are false or misleading, in that this suggestion of proof of the mechanism of action is false and contrary to the language in the approved product labeling that states "[t]he mechanism by which gabapentin [Neurontin] exerts its anticonvulsant action is unknown," and that, furthermore, the full presentation of the areas of the human brain accompanied by purported "Mechanism of Action" and the prominent display of the name "Neurontin" is misleading because it suggests that Neurontin is useful for a broader range of

COMPLAINT

central nervous system conditions than has been demonstrated by substantial evidence.

- From July 1995 through at least August 5, 2002, defendants engaged in a 202. marketing program to promote the use of Neurontin, and to induce physicians to prescribe Neurontin, for medical conditions for which the FDA had not approved Neurontin to be used (i.e., "unapproved" or "off-label" uses). That program included: (a) illegally promoting the sale and use of Neurontin for a variety of conditions other than the one condition for which its use was approved by the FDA and for which defendants had not performed the required FDA testing or established safety and efficacy, in violation of the Federal Food Drug and Cosmetic Act, 21 U.S.C. § 331, et seq.; (b) offering and paying illegal remuneration to doctors, either directly or through third parties, to induce them to promote and prescribe Neurontin for off-label uses, in violation of the federal Anti-kickback Statute, 42 U.S.C. § 1320a-7b(b); and (c) making and/or disseminating false statements in presentations and marketing literature sales personnel provided to doctors concerning, among other things, the uses for which the FDA had approved Neurontin, the conditions for which the use of Neurontin was otherwise medically accepted and/or the existence of adequate evidence of the safety and efficacy for such use.
- 203. In order to avoid sanction and regulation by the FDA, defendants' off-label marketing scheme depended on their concealment of their involvement in off-label promotion of Neurontin, and to make it appear to the public that defendants did not have any hand in any discussions of off-label use. In addition, defendants performed off-label promotion in the semblance of legitimate consultants' meetings, continuing education seminars, journal articles and medical education events. Also, defendants' involvement was hidden because defendants hid their financial connections between the participating physicians and used the vendor participants as payment intermediaries. These activities and others described herein concealed defendants' off-label promotional activities, and plaintiff could not have discovered the scheme alleged herein earlier in the exercise of reasonable diligence. Much of the scheme to this day remains concealed by defendants.
- In May 2003, the details of defendants' interactions with the other participants 204. were disclosed through the filing by a former medical liaison, Dr. David Franklin, of previously

25 26

27

28

sealed materials in opposition to defendants' motion for summary judgment in the qui tam action. This "off-label" promotion scheme remained hidden until, the United States District Court for the District of Massachusetts Court unsealed Dr. Franklin's Amended Complaint in the qui tam case in April or May 2002.

- In addition, defendants fraudulently concealed information and documents 205. concerning the safety and efficacy of Neurontin, in particular, information and documents indicating that the ingestion of Neurontin for off-label uses and/or at high dosages, may cause suicidal ideations, gestures and acts.
- 206. Any applicable statutes of limitation have been tolled by defendants' knowing and active concealment and denial of the facts alleged herein. Plaintiffs' decedent and other members of the public who were prescribed and ingested Neurontin for off-label uses have been kept in ignorance of vital information essential to the pursuit of these claims, without any fault or lack of diligence on their part, and could not reasonably have discovered the fraudulent nature of defendants' conduct, and information and documents concerning the safety and efficacy of Neurontin, in particular, information and documents indicating that the ingestion of Neurontin for off-label uses and/or at high dosages, may cause suicidal ideations, gestures and acts. Accordingly, defendants are estopped from relying on any statute of limitations to defeat any of plaintiffs' claims.
- Similarly, due to defendants' fraudulent concealment of the aforesaid documents 207. and/or information, the scientific and/or medical community was not apprised of vital information concerning safety and efficacy of the drug Neurontin. Furthermore, due to the aforesaid allegations, plaintiffs may rely on the discovery rule in pursuit of this claim.
- On information and belief, defendants' "off-label" promotion scheme continued 208. after the filing of Dr. Franklin's whistleblower complaint and still continues. For example, through the third quarter of 2002, there were no published scientific studies to support Neurontin's use for a wide variety of diseases that it is being prescribed for including anxiety disorder, attention deficit disorder, bipolar disorder, cluster headache, depression, dosages in excess of 1800 mg per day and many other disorders that physicians are now prescribing

Neurontin for that are "off-label." Despite this lack of scientific evidence, Neurontin sales for these and other "off-label" uses have steadily increased, to the point that, according to an article published in the December 1, 2003 issue of Medical Marketing & Media, 90% of Neurontin sales are for "off-label" use. No other drug in the United States has such a high percentage of "off-label" use. The same article estimates that \$1.8 billion worth of Neurontin has been sold for "off-label" uses. This increase in sales, and the repeated and increased prescription of Neurontin for "off-label" uses, without any supporting scientific studies that would be prompting such use, cannot be a random event and could not occur without continuing "off-label" promotion by defendants' sales force.

- 209. As a result of the activities described above, many of which continue to occur after Dr. Franklin filed his whistleblower suit, physicians were inundated with false information about Neurontin. As a result, they continue to prescribe Neurontin for "off-label" uses for which there is no reliable scientific support.
- 210. On information and belief, Pfizer has a company-wide practice of marketing "off-label" indications. "Off-label" marketing plans exist for Cox 2 inhibitors and, on information and belief, also exist for Neurontin.
- 211. This continuing course of conduct is evidenced in part by the staggering growth of Neurontin sales for "off-label" uses. Because there are no valid scientific studies supporting such use, a reasonable inference is that the use results from past and continuing promotional efforts by defendants. This clear and unavoidable conclusion follows from observations regarding the ongoing extent of prescriptions written for "off-label" Neurontin use.
- 212. First, from the perspective of overall Neurontin sales, "off-label" usage of Neurontin has actually increased during the years since 1999; in recent years, "off-label" prescriptions for Neurontin have exceeded 90% of all sales and, in some months, it appears that approved indication usage is negligible.
- 213. Second, although Neurontin is prescribed for scores of "off-label" indications, since 1999 the types of "off-label" usage continue to be weighted in the precise areas where defendants focused their illegal marketing efforts: bipolar disorder, peripheral neuropathy,

Filed 02/2<u>1/</u>2008

migraine, etc.

- 214. Third, these focus treatment areas of continuing unapproved usage are subject to very intense competition between therapeutic substitutes (other drugs or treatments). Indeed, because manufacturers' incremental cost for drugs in these areas is very small (e.g., only pennies to manufacture an additional pill), manufacturers compete aggressively for market share by spending huge amounts of money for marketing, promotional and sales activities. If any company were to simply pack its tent and discontinue programmatic promotional effort in any therapeutic arena, significant loss of overall sales within that diagnosis regime would certainly occur. For Neurontin, no such dip in overall sales, let alone any significant drop, has occurred.
- 215. Fourth, Pfizer, like most branded drug companies, monitors the relationship of its sales to its promotional efforts in very short timeframe; Pfizer would be concerned about a drop in sales within a certain therapeutic regime not after a yearly look-back, or even a quarterly look-back, but over just weeks. The persistent maintenance of high Neurontin sales within multiple, targeted areas for "off-label" promotion over a period of years defies the conclusion that any significant backing away on the marketing, sales or promotion of Neurontin to each of those approved therapeutic areas.
- 216. For example, sales of Neurontin for the treatment of bipolar disorder have steadily increased since its introduction. This increase is a direct result of defendants' sales representatives recommending to doctors its use for this purpose and their distribution of unapproved promotional materials. These promotional efforts did not stop in 1999, but continued thereafter. There are no valid scientific studies that support Neurontin's use for bipolar disorder. Dr. C. Seth Landefeld has submitted an expert opinion in the Franklin litigation that a review of Drugdex for Neurontin, as of the end of August 2002, reveals "no published scientific studies to support Neurontin's use for . . . bipolar disorder." As a result, tens of thousands of patients who need help and could use other drugs whose effectiveness has been established, were given and are being given Neurontin. These prescriptions for this purpose are still being written and as a direct result of defendants' pre-2000 illegal promotional activities and post-2000 illegal promotional activities.

- 217. Likewise, sales of Neurontin for pain, ALS, attention deficit disorder, depression and dosages in excess of 1800 mg per day, are also increasing without any scientific evidence supporting use of Neurontin for such indications. Again, as noted by Dr. Landefeld, as of the end of the third quarter of 2002 "there were no published scientific studies to support Neurontin's use for" any of these indications or in an increased dose.
- 218. Overall, "off-label" sales of Neurontin have steadily increased since 1998, and from 2000 to the present have consistently remained at 93% to 94% of all sales. Actual sales for approved uses have declined. Given the absence of scientific support for such uses, the genesis for those sales can only be past and continuing efforts by defendants to promote "off-label" use.
- 219. Defendants made additional fraudulent misrepresentations as to the safety and effectiveness of Neurontin, which are not detailed herein but will be determined in discovery.
- 220. Defendants affirmatively and fraudulently misrepresented that Neurontin was safe and effective in the treatment of bipolar disorder when, in actuality, Neurontin was ineffective in treating bipolar disorder and instead influenced users to engage in self-destructive behavior.
- 221. Defendants affirmatively and fraudulently misrepresented that Neurontin was safe for human consumption in general, when, in actuality, Neurontin influenced users to engage in self-destructive behavior.
- 222. Defendants knew that Neurontin was not safe and effective in the treatment of bipolar disorder and that Neurontin was not safe for human consumption in general because such drug influenced users to engage in self-destructive behavior.
- 223. Defendants knew that physicians, health care providers, and mental health care providers would justifiably rely upon defendants' misrepresentations in prescribing Neurontin in the treatment of bipolar disorder and in prescribing Neurontin for human consumption in general for the treatment of illnesses and medical and mental conditions and that the public, including persons such as plaintiffs' decedent, would justifiably rely upon defendants' misrepresentations in using Neurontin as prescribed by physicians, health care providers and mental health care providers in the treatment of bipolar disorder and for other prescribed uses.
 - 224. Plaintiffs' decedent justifiably relied upon defendants' misrepresentations and,

accordingly, consumed Neurontin as prescribed by plaintiffs' decedent's physician in the treatment of pain.

- By reason of plaintiffs' decedent's consumption of Neurontin in justifiable reliance 225. upon defendants' fraudulent misrepresentations, plaintiffs' decedent sustained injuries and was caused to commit suicide.
- That by reason of the facts and premises aforesaid, plaintiffs' decedent's 226. beneficiaries sustained damages in a sum which exceeds the jurisdictional limits of all lower courts which would have jurisdiction of this matter, and in addition thereto, plaintiffs seek punitive and exemplary damages against defendants in an amount to be determined upon the trial of this matter.

FIFTH CAUSE OF ACTION

Violation of California Consumer Protection Act

- Plaintiffs repeat and reiterate the allegations previously set forth herein. 227.
- Defendants knowingly and willfully engaged in unlawful, unfair and deceptive and 228. acts and practices in the conduct of trade and commerce that adversely impacted the public interest, and disseminated information that were deceptive, misleading and false in a material way, in connection with the promotion and sale of Neurontin, in violation of California Business & Professional Code §§ 17200 et seq., and 17500 et seq. for the purpose of influencing and inducing physicians and medical providers to prescribe Neurontin, at excessively high dosages, for unapproved "off-label" uses, including treatment for pain, to patients/consumers such as plaintiffs' decedent, and knowingly took advantage of the inability of patients/consumers such as plaintiffs' decedent reasonably to protect their interests because of their physical and mental infirmities, and causing such patients/consumers to purchase, acquire and use Neurontin, at high dosages, for unapproved "off-label" uses, including treatment for pain, as prescribed by their physicians and medical providers.
- By reason of defendants' unconscionable, unlawful, deceptive and unfair acts and practices, and dissemination of deceptive, misleading and false information, reasonable patients/consumers acting reasonably, such as plaintiffs' decedent, were caused to commit

27

suicide.

230. That by reason of the facts and premises aforesaid, plaintiffs' decedent's beneficiaries sustained actual damages in a sum which exceeds the jurisdictional limits of all lower courts which would have jurisdiction of this matter, and in addition thereto, plaintiffs' seek punitive and exemplary damages against Defendant in an amount to be determined upon the trial of this matter, together with reasonable attorney's fees and costs.

SIXTH CAUSE OF ACTION

Survival Action

- 231. Plaintiffs repeat and reiterate the allegations previously set forth herein.
- 232. That at the time of the incident and during plaintiffs' decedent's consumption of Neurontin prior to and until the time of his death, plaintiffs' decedent suffered suicidal ideations and apprehension of death during a period of time leading up to the actual commission of suicide.
- 233. That for a period of time leading up to and at the time of the aforesaid suicide, plaintiffs' decedent lived and was suffering excruciating mental anguish, severe pain and suffering.
- 234. That by reason of the facts and premises aforesaid, plaintiffs' decedent's beneficiaries sustained damages recoverable pursuant to Cal. Code Civ. Proc. §§ 377.10 et. seq., in a sum which exceeds the jurisdictional limits of all lower courts which would have jurisdiction of this matter, and in addition thereto, plaintiffs seek all damages available under applicable laws, including but not limited to, exemplary damages against defendants in an amount to be determined upon the trial of this matter.
- 235. Defendants are liable for all economic damages sustained by the estate of Alan Bennett.
- 236. Defendants are liable for all funeral expenses, medical special damages and any other out of pocket costs sustained by the plaintiffs.

PRAYER FOR RELIEF 1 2 WHEREFORE, plaintiffs pray for judgment against defendants as follows: 3 General damages to be proven at time of trial; (1) 4 (2) Special damages to be proven at time of trial; 5 Attorneys' fees and costs, plus interest, as allowed by law; (3) 6 Punitive and exemplary damages; and 7 (4) Such other and further relief as the Court deems just and proper. (4) 8 Plaintiffs hereby demand a trial by jury. 9 10 DATED: February 0, 2008 ROBINSON, CALCAGNI & ROBINSON INC. 11 12 13 Mark P. Robinson, Jr., Esq. 14 Attorneys for Plaintiffs 15 Andrew G. INFORMATION

Filed 02/21/2008

THE UNITED STATES ATTORNEY FOR THE DISTRICT OF MASSACHUSETTS CHARGES THAT:

GENERAL ALLEGATIONS

At all times material to this Information, unless otherwise alleged:

BACKGROUND

- WARNER-LAMBERT COMPANY LLC (hereinafter "WARNER-LAMBERT"), was a corporation operating and existing under the laws of the State of Delaware. Its principal place of business was Morris Plains, New Jersey. WARNER-LAMBERT's Parke-Davis Division was engaged in, among other things, the development, manufacture, promotion, sale, and interstate distribution of prescription drugs intended for human use in the United States. WARNER-LAMBERT's pharmaceutical manufacturing facilities were located in Puerto Rico, from which it shipped products to all fifty states and the District of Columbia.
- The Federal Food, Drug and Cosmetic Act ("FDCA"), among other things governs the lawful interstate distribution of drugs for human use. As codified at Title 21, United States Code, Sections 331 et seq., and specifically at § 355(b), the FDCA, and its implementing regulations, require that before a new drug may legally be distributed in interstate commerce, a sponsor of a new drug product must submit a New Drug Application ("NDA").
- The FDCA required, at 21 U.S.C. § 355, that the NDA sponsor submit to the United States Food and Drug Administration ("FDA"), as part of an NDA, proposed labeling for the proposed intended uses for the drug which included, among other things, the conditions for therapeutic use. The NDA must also provide, to the satisfaction of FDA, data generated in

randomized and well-controlled clinical trials that demonstrates that the drug will be safe and effective when used in accordance with the proposed labeling.

- 4. The FDCA, at 21 U.S.C. § 355, prohibited the introduction into interstate commerce of any new drug, unless an approval of an NDA is effective. Only after the NDA, including the proposed labeling, was reviewed and approved by FDA, was the sponsor permitted by law to promote and market the drug, and only for the medical conditions of use specified in the approved labeling, for which use FDA had found sufficient evidence of safety and effectiveness. Uses unapproved by FDA, not included in the drug's approved labeling, are known as "unapproved uses" or "off-label uses."
- 5. The FDCA, and the regulations promulgated thereunder, required that in order to label or promote a drug for a use different than the conditions for use specified in the approved labeling, the sponsor had to file a new NDA, or amend the existing NDA, by, among other requirements, submitting the newly proposed indications for use and evidence, in the form of randomized and well-controlled clinical studies, sufficient to demonstrate that the drug would be safe and effective for the newly proposed therapeutic use or uses. Only upon approval of the new NDA could the sponsor promote the drug for the new intended use.
- 6. The FDCA, at 21 U.S.C. § 352(f)(1), provided that a drug was misbranded if, among other things, the labeling did not contain adequate directions for use. As the phrase is used in the FDCA, adequate directions for use cannot be written for medical indications or uses for which the drug had not been proven to be safe and effective through well-controlled clinical studies because that would be misleading under Section 352(a).

- The FDCA, 21, U.S.C. §§ 331(a)(d), 333(a), and 355, prohibits the distribution in interstate commerce of an unapproved new drug or of a misbranded drug.
- In or about 1993, WARNER-LAMBERT submitted an NDA for approval of a drug called Neurontin (also known by the chemical name gabapentin), which was a new drug within the meaning of 21 U.S.C. § 321(p) and 21 C.F.R.§ 310.3 (h)(4) and (5). In that application, WARNER-LAMBERT sought to demonstrate the drug's safety and efficacy for, and sought approval for, use only as adjunctive therapy in the treatment of partial seizures with and without secondary generalization in adults with epilepsy. On or about December 30, 1993, FDA approved Neurontin for that specific use only. This approved use for Neurontin will be referred to throughout this Information as the "Approved Use." Because WARNER-LAMBERT had not sought approval of any other uses nor submitted information in its NDA which demonstrated the safety and efficacy of Neurontin for any such uses, Neurontin was not approved for any use or condition other than the Approved Use. Further, Neurontin was not, pursuant to 21 U.S.C. § 355(i), exempt from the prohibition of introducing into interstate commerce a new drug for medical indications beyond the conditions prescribed, recommended, or suggested in the approved labeling thereof.
- As described in this Information, from at least June of 1995 through at least August 20, 1996, unapproved uses for Neurontin included post-herpetic neuralgia, painful diabetic neuralgia, anxiety disorder, social phobias, bipolar disorder, alcohol withdrawal syndrome, amyotrophic lateral sclerosis (ALS), spinal cord injury, essential tremor, restless leg syndrome, reflex sympathetic dystrophy (RSD); and migraine headaches, among other uses.

These and other unapproved uses for Neurontin will be collectively referred to in this Information as the "Unapproved Uses."

WARNER-LAMBERT did not file a new NDA seeking FDA approval for any of 10. these Unapproved Uses during the time period addressed in this Information. Of these Unapproved Uses, only post-herpetic neuralgia has ever received FDA approval, and that approval was applied for and received after the events described in this Information.

WARNER-LAMBERT'S STRATEGY FOR NEURONTIN

- WARNER-LAMBERT conducted evaluations of the market potential for certain of the Unapproved Uses for Neurontin, including but not limited to: post-herpetic neuralgia, painful diabetic neuralgia, anxiety disorder, social phobias, and bipolar disorder.
- 12. In or about the fall of 1995, WARNER-LAMBERT's Southeast Customer Business Unit ("SECBU") created a planning document regarding Neurontin, which included a page titled: "SECBU RIGHT ON THE MARK WITH NEURONTIN AND PAIN" over a picture of a target and listed "Neurontin for Pain Strategies" including conference calls on pain and a pain consultant meeting.
- Certain of WARNER-LAMBERT's annual strategic plans and other marketing planning documents for Neurontin included quarterly and annual goals, objectives, strategies, and tactics for increasing sales of the Unapproved Uses of the drug. The marketing plans budgeted for and funded these tactics.
- From early 1995, on repeated occasions, WARNER-LAMBERT determined not to seek FDA approval for certain Unapproved Uses.

- In or about April and May of 1995, WARNER-LAMBERT performed a 15. Marketing Assessment of proposed psychiatric indications for Neurontin. In that Marketing Assessment, WARNER-LAMBERT forecast potential revenue from Neurontin for bipolar and anxiety treatment under two scenarios: with and without FDA approval. WARNER-LAMBERT's Neurontin Development Team and New Product Committee reviewed the potential psychiatric uses and concluded that the company would not seek approval to promote and sell the drug for these Unapproved Uses.
- 16. In or about July of 1995 WARNER-LAMBERT's assessment of Neurontin's market potential for neuropathic pain was distributed to its Neurontin Development Team and to a WARNER-LAMBERT Vice President for Marketing. That assessment stated that "there is no intention to fully develop the indication at this point." Full development would have required submission of an NDA to FDA for approval.
- One of the principal factors WARNER-LAMBERT considered in determining 17. whether to seek approval for Neurontin for other uses was the short patent protection available for Neurontin. Another factor was the negative impact such approval might generate on potential sales of another drug that WARNER-LAMBERT had been developing. The company expected this new drug would be approved by FDA not only for epilepsy but also for a variety of uses beyond Neurontin's Approved Use.
- Once Neurontin's patent expired, other companies could seek approval to distribute generic equivalents of Neurontin. Such approval, however, would be limited to the approved therapeutic use for Neurontin set forth in WARNER-LAMBERT's original NDA approval for Neurontin. If WARNER-LAMBERT sought and obtained approval for any of the

Unapproved Uses, then upon expiration of the patent, generic equivalents of Neurontin could also be sold for those Unapproved Uses. WARNER-LAMBERT was concerned that under those circumstances the generic equivalents would undermine sales of the new drug that was under development.

WARNER-LAMBERT'S PROMOTION OF NEURONTIN FOR UNAPPROVED USES

From in or about June of 1995 through in or about August 20, 1996, by certain of the conduct described in greater detail below, WARNER-LAMBERT promoted the sale and use of Neurontin for certain conditions other than the Approved Use in Massachusetts and elsewhere:

OFF-LABEL PROMOTION THROUGH SALES REPRESENTATIVES

- In October 1995, a member of WARNER-LAMBERT's Epilepsy Disease Team circulated a memorandum to a group including other senior members of WARNER-LAMBERT's Epilepsy Disease Team noting that data purchased from an outside vendor showed that doctors had reported that the main message of certain sales pitches (known as "details"), given by 10 of 50 WARNER-LAMBERT sales representatives for whom data was available in a two month period, was for off-label use of Neurontin. Nine were for pain and one was for reflex sympathetic dystrophy, a painful nerve damage syndrome.
- On or about July 10, 1996, a WARNER-LAMBERT sales representative met with 21. a doctor in Monroe, Louisiana, and detailed a doctor on Neurontin for the treatment of pain.
- Also in 1996, a sales representative created a document that stated that sales 22. representatives could ask doctors during a Neurontin detail if they ever used other anti-epileptic drugs for painful neuropathies and could mention that approximately 35% of all Neurontin use is non-seizure. This same document, entitled "Neurontin Can Do/Can't Do," stated that sales

representatives could do lunch programs on Neurontin and pain. The document indicated that it was to be forwarded to the Northcentral Customer Business Unit.

OFF-LABEL PROMOTION THROUGH MEDICAL LIAISONS

- WARNER-LAMBERT employed "medical liaisons" who were presented to physicians as employees of the company's Medical and Scientific Affairs Department. On the following occasion, a WARNER-LAMBERT medical liaison promoted Neurontin for Unapproved Uses:
 - (a) In or about June of 1996, a WARNER-LAMBERT sales representative requested that a WARNER-LAMBERT medical liaison make a presentation at Longwood Gardens in Kennett Square, Pennsylvania, to a group of physicians who were members of a local medical society.
 - (b) The sales representative and the medical liaison selected the topic for the presentation to the local medical society. After deciding in consultation with the sales representative that Neurontin would be the topic of the presentation, the medical liaison prepared the presentation.
 - (c) Among the topics of the presentation was the use of Neurontin for Unapproved Uses.
 - (d) During the presentation, in the presence of the sales representative, the medical liaison promoted the use of Neurontin in the treatment of a number of Unapproved Uses.

- (e) After the presentation, a WARNER-LAMBERT Medical Director praised the event as "another great example of use of the medical liaisons" and an Area Business Manager called it an "outstanding utilization of . . . one of the medical affairs liaisons."
- 24. In or about May 1996, a WARNER-LAMBERT Medical Director based in the Northeast CBU sent a voicemail message to the Medical Liaisons in the Northeast CBU in which he stated:

What we'd like you to do is, any time you're called out just make sure that your main focus out of what you're doing is on Neurontin . . . When we get out there, we want to kick some ass, we want to sell Neurontin on pain. All right? And monotherapy and everything that we can talk about, that's what we want to do.

One or more Medical Liaisons in the Northeast CBU interpreted this statement to mean that he or she should promote Neurontin for Unapproved Uses and thereafter, in or about May and June 1996, promoted Neurontin for neuropathic pain, an unapproved use.

OFF-LABEL PROMOTION THROUGH CONSULTANTS' MEETINGS AND ADVISORY BOARDS

- WARNER-LAMBERT organized a consultant meeting at the Jupiter Beach Resort in Palm Beach, Florida on April 19-21, 1996. Approximately 42 physicians attended the meeting, including nine physicians who made presentations relating to Unapproved Uses of Neurontin.
- 26. WARNER-LAMBERT invited certain doctors to this meeting based upon their history of writing a large number of prescriptions for Neurontin or similar drugs. As part of this event, WARNER-LAMBERT paid for accommodations and meals for the invited doctors and

Filed 02/2<u>1/</u>2008

their spouse or guest, and paid an honorarium to each of the doctor attendees. Doctors who acted as faculty were paid between \$1,500 and \$2,000.

- 27. Among the presentations made to the physicians in attendance was one relating to Unapproved Uses entitled "Reduction of Pain Symptoms During Treatment with Gabapentin." In the meeting's agenda, this presentation was listed as "Anticonvulsant Advances." During this presentation, Neurontin was promoted for use in the treatment of pain.
- 28. Another presentation made at the Jupiter Beach conference was entitled "Anticonvulsant Advances: Nonepileptic Uses of Anti Epileptic Drugs." During this presentation, Neurontin was promoted for use in the treatment of essential tremor, episodic dyscontrol, and pain.
- 29. On or about May 8, 1996, following the Jupiter Beach conference, WARNER-LAMBERT circulated to employees in the Northeast region the agenda to the meeting, specifying the off-label topics, the faculty list, the attendee list and presentation abstracts discussing the off-label content of the presentations. WARNER-LAMBERT told its employees that: "[t]he meeting was a great success and the participants were delivered a hard-hitting message about Neurontin." WARNER-LAMBERT distributed to these employees a form entitled "Jupiter Beach Trending Worksheet" which was intended to be used to gauge the effect of the meeting on the prescribing by doctors who attended the Jupiter Beach meeting.
- 30. From August 1-5, 1996, WARNER-LAMBERT organized an "advisory board meeting," in Atlanta, Georgia in conjunction with the 1996 Summer Olympics. WARNER-LAMBERT expressly instructed several of the physician speakers to address some of the Unapproved Uses.

- 31. During that meeting, WARNER-LAMBERT hosted doctors at the Chateau Elan Winery and Resort, in Atlanta, Georgia, and paid all the expenses for eighteen "consultants" and their spouses to attend the Olympics, including tickets to the closing ceremonies. The company had already had numerous opportunities to consult with the doctors and, in fact, many of them had spoken on WARNER-LAMBERT's behalf at prior meetings.
- 32. Certain of the physician speakers promoted Neurontin for unapproved uses in their presentations.

OFF-LABEL PROMOTION THROUGH TELECONFERENCES

- 33. In or about January, 1996, a WARNER-LAMBERT Vice President of the Southeast Customer Business Unit sent a memorandum to WARNER-LAMBERT sales representatives listing certain goals, including: "Utilize the Medical Liaison Group to target the Neurontin, Pain & Psychiatric market. Objective to conduct twice weekly Pain Teleconferences moderated by key Neuro Consultants. Goals 250 Physicians Participants quarterly."
- 34. On or about March 1, 1996, WARNER-LAMBERT sponsored such a teleconference moderated by a WARNER-LAMBERT employee with a pain specialist as a speaker on Neurontin. The speaker promoted Neurontin for the treatment of pain to doctors participating in the teleconference.
- 35. On or about March 28, 1996, a WARNER-LAMBERT Medical Director in the Northcentral Customer Business Unit sent a memorandum to WARNER-LAMBERT Medical Liaisons in that unit instructing them to hold a series of teleconferences with doctors to provide clinical updates on Neurontin, including monotherapy epilepsy data and non-epilepsy use data entitled "Neurontin, A Clinical Update."

36. In or about May, 1996, a WARNER-LAMBERT Medical Director held such a teleconference entitled "Neurontin, A Clinical Update" in which the Medical Director promoted off-label uses of Neurontin to the doctors participating in the teleconference.

COUNT ONE: 21 U.S.C. §§ 331(d), 333(a)(2) & 355(a)

(Distribution of an Unapproved New Drug)

- 37. The allegations contained in paragraphs 1 through 36 are realleged and incorporated herein as if set forth in full.
- 38. Beginning as early as in or about April 1995, and continuing thereafter until at least in or about August 20, 1996, in the District of Massachusetts, and elsewhere,

WARNER-LAMBERT,

after previously having been convicted of violating the Federal Food, Drug and Cosmetic Act, 21 U.S.C. §§ 331 and 333, did introduce and cause the introduction into interstate commerce from Puerto Rico and elsewhere, directly and indirectly, into Massachusetts and elsewhere, quantities of Neurontin, a drug within the meaning of the Federal Food, Drug and Cosmetic Act, 21 U.S.C. § 321(p), which drug was intended for use for the treatment of neuropathic pain, bipolar disorder, as monotherapy for epilepsy, and other Unapproved Uses. No approval, pursuant to 21 U.S.C. § 355, was in effect with respect to Neurontin for use in these conditions.

COUNT TWO: 21 U.S.C. §§ 331(a), 333(a)(2) & 352(f)(1)

(Distribution of a Misbranded Drug: Inadequate Directions for Use)

- . 39. The allegations contained in paragraphs 1 through 36 are realleged and incorporated herein as if set forth in full.
- 40. Beginning as early as April 1995, and continuing thereafter until at least in or about August 20, 1996, in the District of Massachusetts and elsewhere,

WARNER-LAMBERT,

after previously having been convicted of violating the Federal Food, Drug and Cosmetic Act, 21 U.S.C. §§ 331 and 333, did introduce and cause the introduction into interstate commerce from Puerto Rico and elsewhere, directly and indirectly, into Massachusetts and elsewhere, quantities of Neurontin, a drug within the meaning of the Federal Food, Drug and Cosmetic Act, 21 U.S.C. § 321(p), which drug was intended for use for the treatment of neuropathic pain, bipolar disorder, as monotherapy for epilepsy, and other Unapproved Uses, and which was misbranded within the meaning of 21 U.S.C. § 352(a), in that Neurontin's labeling lacked adequate directions for such કુંગારી છે. તે માનું જુરાનો માર્ગ કે કુંગાનું માના પ્રાથમિક કર્યો હતા. માનું કરે કરી કિંગોને તેમ માને માની માનુ uses.

All in violation of 21 U.S.C. §§ 331(a), 333(a)(2), and 352(f)(1).
